

During your stay or visit to hospital you have had a swab taken to confirm whether you have or have not got Covid19.

The test usually takes 36 hours to process.

If you have symptoms of Covid19 you must remain in isolation until you receive these results. Symptoms of Covid19 are a new persistent cough, fever or loss of sense of taste or smell.

NEGATIVE RESULTS

Due to the large numbers of swabs we are processing we will not contact you if your result was negative. If you have not received a result within 48 hours of your swab you should presume that your result was negative.

POSITIVE RESULTS

You will be contacted by a clinical person with the results. A positive result means you must stay in isolation for 7 days from the start of your symptoms, if you have no symptoms you must stay in for 7 days from the day of your swab test. Any household contacts must also stay in isolation for 14 days from the same date.
