

Data Protection Impact Assessment

Reference:	DPIA006
DPIA title:	Stoma Care
Summary:	<p>Migrate data from existing application and provide access to the new partner – Coloplast Ltd and their bespoke patient management system called MiME. MiME is tailored to the Stoma Care service and allows the Stoma nurses to log all clinical activity, non-patient activities in order to produce automated reports and patient group audits. MiME also records prescribed ostomy appliances required by patients and has a unique bag cutting template feature which prevents the need to either fax or post the product template to a delivery company.</p> <p>The benefits for both nurse & trust are that all the department workload can be easily shared and that patient data for review and assessment are easily accessed throughout the trust. The system is hosted on the HSCN network. MiME offers bespoke tools to the nurses that the main hospital system is unable to provide. Also, the reporting side of MiME supports the nurses to produce annual business plans/reports showing the value of their specialist clinical service and any 'value added interventions'. MiME enables the nurses to become paperless which is a goal NHS are trying to reach.</p>
